

KOUADIO ABEL BEKANTIE

State Engineer in Computer Science – Data Science & Artificial Intelligence
Data Engineering | Data Analytics | Business Intelligence

+225 07 19 86 96 91 | ✉ abelkouadio195@gmail.com | 🌐 <https://abelkouadio-portfolio.vercel.app>

Engineer with expertise in data engineering pipelines, data analytics. Experienced in end-to-end data workflows, from data ingestion and transformation to the delivery of dashboards, actionable insights, and AI-ready datasets that support business decision-making.

TECHNICAL SKILLS

Programming Languages - SQL, Python, R, DAX, Scala, Java,
Cloud & Data Infrastructure - BigQuery, GCS, GCP, AWS, S3, Snowflake, dbt, DuckDB, Data Lake, MinIO
Data engineering - Apache Airflow, Spark, PySpark, Kafka, ETL/ELT, Web Scraping
Databases & Libraries - MySQL, PostgreSQL, MongoDB, Pandas, Numpy, Scikit-learn
Data Visualization - Power BI, Excel, Google Sheets, Matplotlib, Seaborn, Tableau
Development & Deployment - VS Code, Git, GitHub, Jupyter Notebook, Docker, Postman, Environnements Linux
Software engineering - React, Next.js, Spring Boot, Django, FastAPI, CI/CD
Soft skills : Adaptability, Versatility, Clear Communication, Critical Thinking, Organization, Teamwork, Autonomy

PROFESSIONAL EXPERIENCE

Data Engineer / Business Data Analyst, AGH Data Agency Holding SA, Meknès MOROCCO

December 2025 – April 2026

Contributed to the collection, structuring, and preparation of thousands of records used to train Large Language Models (LLMs) integrated into the company's AI applications (mental health, natural beauty, dropshipping, etc.).

- **Data Engineering Pipeline – From Data Ingestion to LLM Delivery**
 - Designed and implemented a complete data ingestion pipeline from web sources, APIs, CSV, and other data formats.
 - Collected and stored raw data in a local data lake using a structured storage architecture.
 - Cleaned, transformed, and standardized datasets using Python (Pandas, NumPy).
 - Built structured JSON datasets optimized for LLM training requirements.
 - Partially automated the pipeline to process **10,000+** records per day with a data quality rate above **95%**.
 - Collaborated closely with AI teams to align datasets with model requirements.
- **Business & Product Data Analysis**
 - Performed comprehensive competitive analysis across **10+** AI applications, including:
 - Developed detailed benchmark studies covering more than **50** competing applications across multiple industries.
 - Scraped Google Play Store metadata, statistics, and categories using Google Play Scraper (Python).
 - Applied NLP techniques to classify user reviews and extract actionable product insights.
 - Built Power BI dashboards supporting product positioning and decision-making.
 - Defined monetization and pricing strategies for **10+** applications, including freemium and hybrid business models.

Stack : Power BI, Python, Excel, SQL, Web Scraping, APIs, PostgreSQL/MySQL

Final-Year Internship – Data Science & Software Engineering, ATLECS, Fès MOROCCO

February 2025 – July 2025

- Designed and developed an automated data collection system to optimize engineer recruitment and placement for HR teams.
- Implemented an ETL pipeline combining OCR and NLP (SpaCy) to extract structured information from CVs (PDF, Word, Images) with **90–95%** extraction accuracy, storing candidate data in MySQL.
- Developed an interactive dashboard monitoring **500+** resumes and **100+** consultants, reducing CV analysis time by **30%**.
- Integrated backend services using Spring Boot and REST APIs to connect data pipelines with the internal application.

PERSONAL PROJECTS

Explore all my Data Engineering, Data Analytics, and Machine Learning projects on my portfolio.

Digital & Financial Inclusion Observatory for the Ministry of Digital Transition – Côte d'Ivoire

June 2026

Designed a data platform to monitor regional digital and financial inclusion using four heterogeneous data sources (telecommunications, mobile money, public digital services, and socio-demographic indicators) based on public datasets provided by ARTCI and INS.

- Designed a Bronze/Silver/Gold architecture on Google Cloud Storage, and orchestrated workflows with Apache Airflow.
- Built analytical models in BigQuery using dbt, implemented automated data quality checks.
- Developed a composite Digital Inclusion Index visualized through Power BI dashboards.
- Built a predictive model identifying regions at risk of digital exclusion over the next 6–12 months.

EDUCATION

State Engineering Degree in Computer Science - Specialization: Data Science & Artificial Intelligence

2022 - 2025

ENSAM - Rabat, MOROCCO

Scientific Preparatory Classes - Mathematics & Physics

2020 - 2022

ESTEM- Casablanca, MOROCCO

Scientific Baccalaureate (Honours)

2017 - 2020

Lycée Scientifique Félix Houphouët Boigny - Yamoussoukro, COTE D'IVOIRE

CERTIFICATIONS

Google Data Analytics, Google

March 2026

English Certificate (C1 Advanced), EF SET

March 2026

Machine learning with Python, FreeCodeCamp

November 2025

LANGUAGES AND INTERESTS

(English - C1), (French - Native), (German - A1) | **Interests** : Basketball, History, Science
